Name: Bhavani Manthena
UIN: 01033879
Course: CS726

Features:

- **Click** on the page anywhere to see all the connections the node have
- **Hover** on a specific node to see its details (coordinates).
- Click on a **Specific node** to see its paths and when hover on a specific path, you can see which nodes are connected and what is the edge weight.
- There is a **legend** on the right side, which represents the paths in specific intervals, on clicking a specific legend item, only the paths in the specific interval (edge weights) are shown.
- On clicking each **legend circle**, you can see the difference in size of the path(the thickness of the line is based upon the edge weight), as low as the edge weight, thinner the line is.
- On clicking **Choose File**, you can browse for a .csv file in your computer and upload it, and the graph will be changed on clicking Upload.
- Also, you can see which **File** you have uploaded and is in use, just above the "Choose file" after uploading the file.

How to Execute:

- The working link is http://www.cs.odu.edu/~bmanthen/bio/bioinfo.php
- On the .csv file, the names of each column should be in the following format,

  x1   x2   y1   y2   wt   z1   z2

- Unless the .csv is in the above format, it will not work.
- Also, open it in Google Chrome, as Internet explorer might take time to load and show each specification properly.
